

WaterLase Dentistry

WaterLase dentistry is one of the most advanced dental treatments today. WaterLase uses a patented technology that combines focused light energy with a stream of water for a highly precise, exceptionally gentle dental experience.

WaterLase allows your dentist to perform a wide range of procedures with benefits including:

- ★ Faster healing time and less trauma to teeth and gums.
- ★ Less anesthetic for most procedures.
- ★ Treating dental needs in more than one part of the mouth in one visit.
- ★ Making dental care a more relaxing experience for you and your child.

You deserve better dentistry.

“It didn't hurt. At my other dentist they had to numb you and put all this junk in your mouth. But the laser didn't hurt and it was quick and fast. I didn't have to wait an hour to drink water and stuff.”

Kid preferred... Mom approved!

The WaterLase laser uses a combination of laser energy and water energy to perform dental procedures that otherwise are performed with a dental drill or scalpel. This gentler method of treatment can help eliminate fear and anxieties associated with dental visits and help foster a healthier life-long mindset about oral care.

WaterLase Dentistry: Gentle & Precise

WaterLase dentistry is a gentler and more precise instrument for your child's dental needs. The American Academy of Pediatric Dentistry recognizes the use of lasers in dental procedures for infants, children, adolescents, and people with special health care needs.

Preferred treatment for tooth decay & cavities

WaterLase laser energy quickly removes cavities with pinpoint accuracy – without the heat, vibration, and shrill sound of the drill.

Even better, for the majority of patients, no anesthesia is necessary. Fewer shots mean less fear, less stress and less anxiety for both you and your child. Little to no numbness after the procedure leads to less accidental cheek biting, and fewer adverse side effects associated with anesthesia.

Less trauma and faster healing

Patients treated with laser energy recover more quickly. Because the WaterLase laser performs incisions so precisely, it stops bleeding before it starts. Soft tissue procedures, such as frenectomies, are made far less painful and traumatic. Wound healing can occur more rapidly with less discomfort for your child and a reduced need for post-operative antibiotics.
